Why R

Francisco Rodriguez-Sanchez

http://bit.ly/frod_san

Why R

- Free, open-source, cross-platform

Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language

Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language
- Can do many things beyond stats (e.g. scrape web data, GIS, etc)

Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language
- Can do many things beyond stats (e.g. scrape web data, GIS, etc)
- +10,000 packages extending functionality

Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language
- Can do many things beyond stats (e.g. scrape web data, GIS, etc)
- +10,000 packages extending functionality
- Flexible, powerful

Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language
- Can do many things beyond stats (e.g. scrape web data, GIS, etc)
- +10,000 packages extending functionality
- Flexible, powerful
- Can easily connect to other languages (e.g. C++)

Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language
- Can do many things beyond stats (e.g. scrape web data, GIS, etc)
- +10,000 packages extending functionality
- Flexible, powerful
- Can easily connect to other languages (e.g. C++)
- High-quality graphics

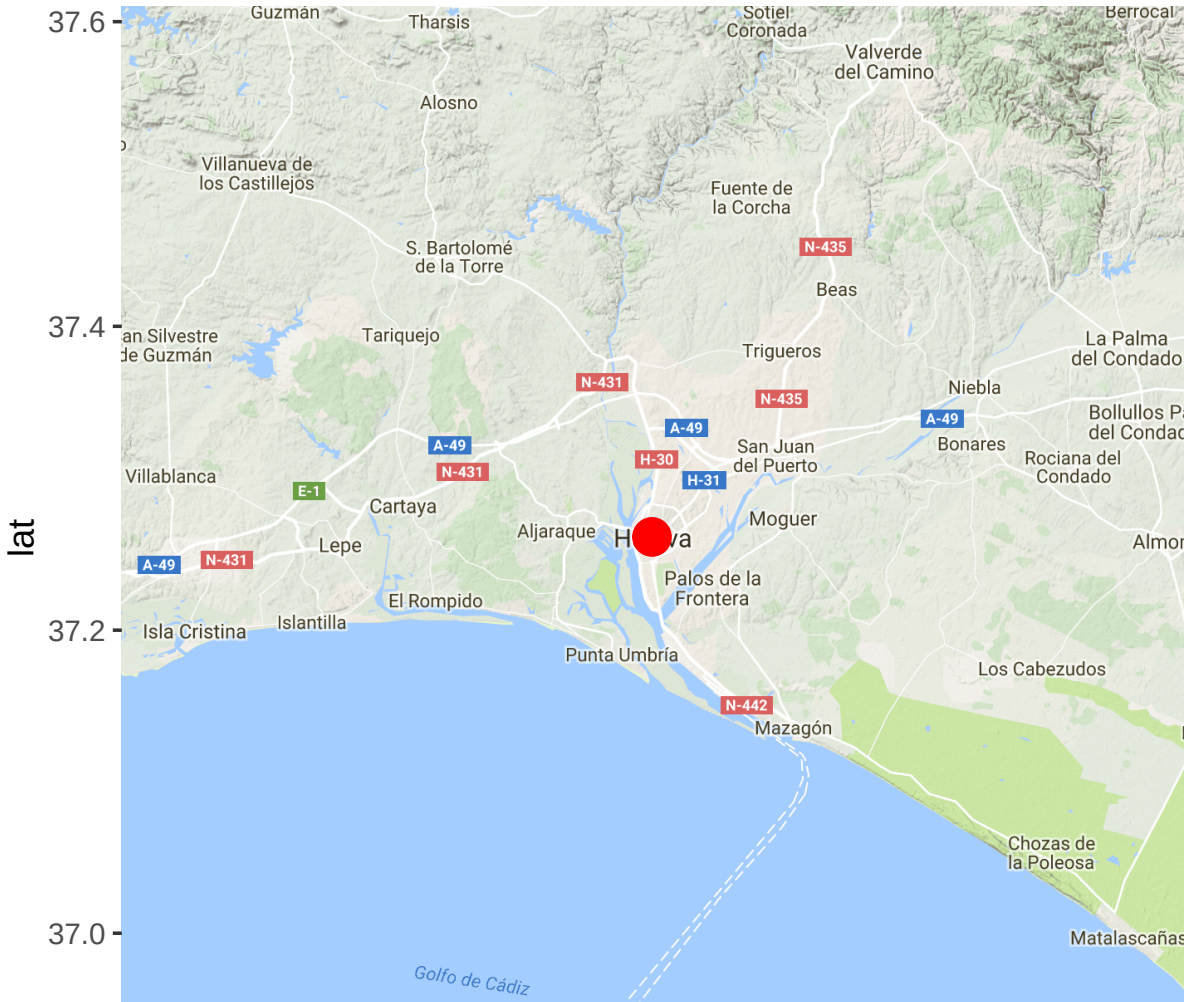
Why R

- Free, open-source, cross-platform
- Not just stats package, but a programming language
- Can do many things beyond stats (e.g. scrape web data, GIS, etc)
- +10,000 packages extending functionality
- Flexible, powerful
- Can easily connect to other languages (e.g. C++)
- High-quality graphics
- Large, helpful community (forums, StackOverflow, Twitter)

Some cool things you can do with R (apart from cutting-edge stats)

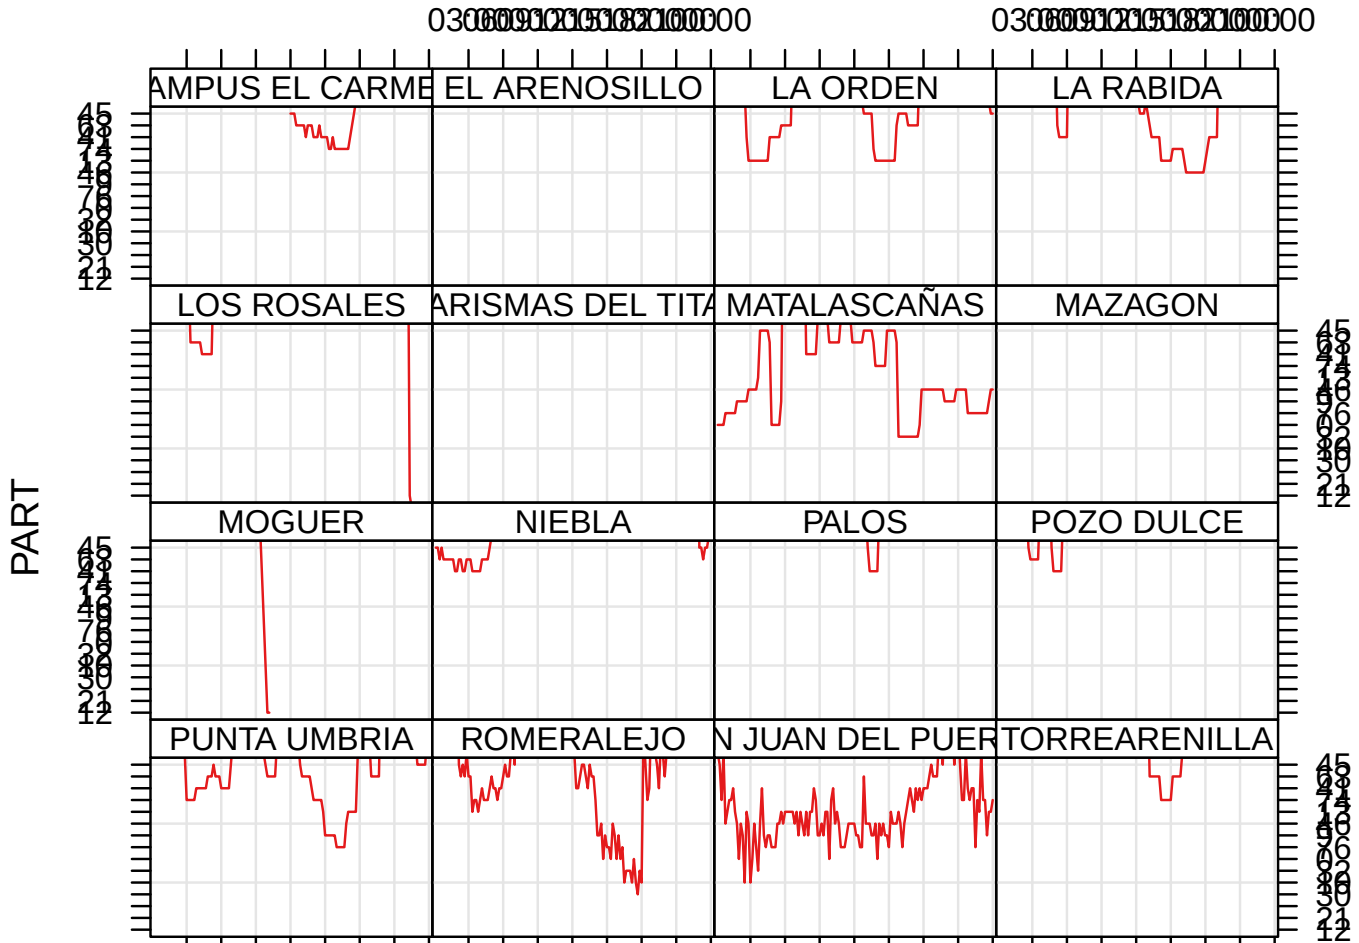
Where am I?

```
library(ggmap)
here <- geocode("Campus del Carmen, Huelva, Spain")
ggmap(get_map(here)) +
  geom_point(data = here, aes(lon, lat), size = 5, colour = "red
```



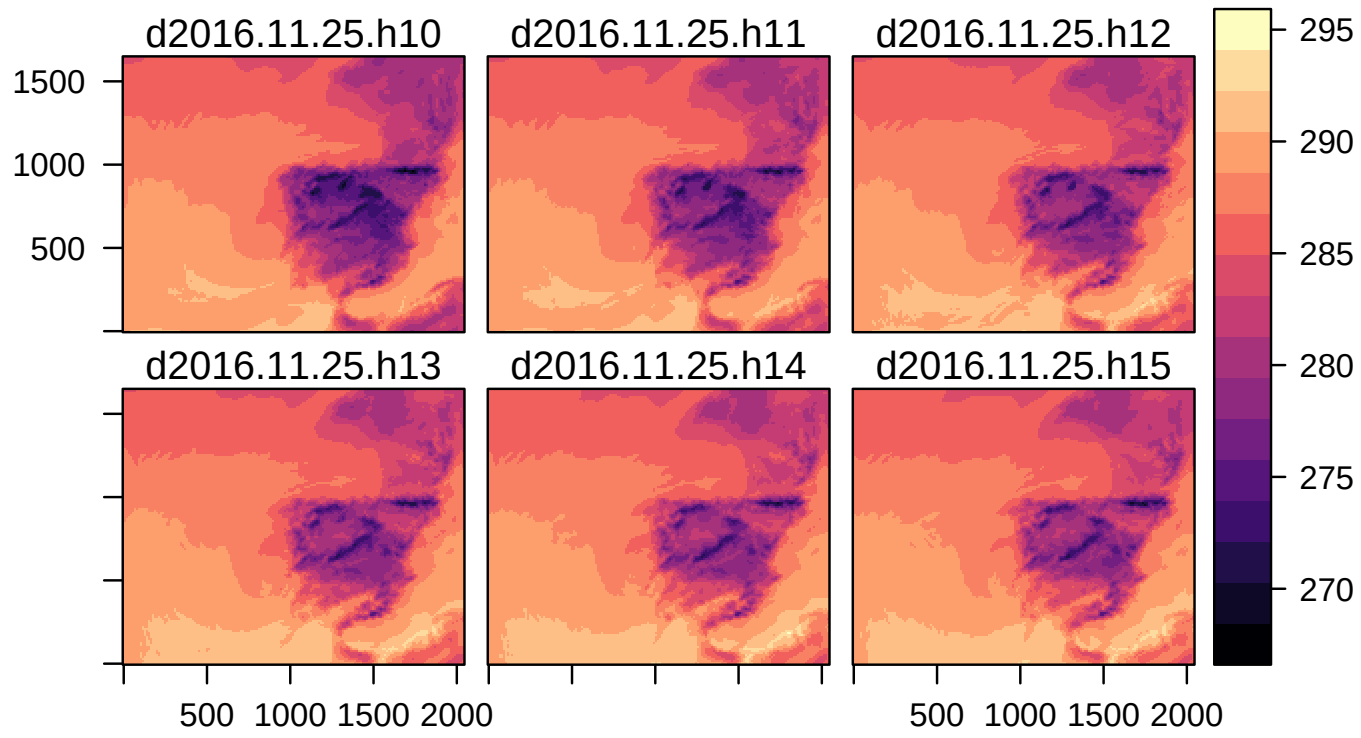
How was air quality yesterday in Huelva?

```
library(aire)
air.hu <- get_daily_data("2016-11-29", province = "hu")
library(openair)
timePlot(air.hu, pollutant="PART", type="site")
```



Get climate data from the web

```
library(meteoForecast)
tiempo <- getRaster("temp", day = "2016-11-25")
library(rasterVis)
levelplot(tiempo, layers=10:15)
```



Create websites, slides, articles, thesis

Download countries data from World Bank and display motion chart

```
library(googleVis)
demo(WorldBank)
```

and many more. . .
